

OYSTER GRADER/TUMBLER

This grader tumbler is designed for smaller tray culture applications where growers require a portable oyster tumbler that can be easily moved and mounted directly on oyster rafts or skiffs, if required, and has adjustable legs for height/angle adjustment. It comes with a 110 volt reduction gear, or could be converted to hydraulic. It also has a shower spray tube down the center of the tumbler, for washing product, with a standard hose fitting.

The grader is lined with plastic coated wire mesh screen and can be custom sized to individual grower requirements. Additional screens can also be interchanged quickly. The grader is constructed to have 4 size grades separated typically: 1) small debris and fouling (ie mussel set), 2 wire mesh screens for oysters and with a fourth (oversize) grade coming out the end.

During typical operations the grader should be able to process a minimum of 1 tray per minute.

Approximate Specifications:

- ❑ Length overall: 10 feet (with table removed), 12 feet (with table)
- ❑ Height: 7 feet (including motor)
- ❑ Width: 32"
- ❑ Weight: ~300 lbs (complete) (able to be lifted by skiff mounted cranes).
